Scallops Harvested within Classified production areas:

All Scallops harvested within classified production areas are classified as B unless harvested within classified production areas where all other mollusc shellfish are classified of being class A where such scallops may be classified as A.

Lapsed Classifications:

The classifications for the areas listed below have lapsed because they are no longer active, or because an insufficient number of samples were available for the review period, and are subsequently no longer classified.

<u>Production Area</u>	<u>Species</u>
South Shore	Urchins

Notes:

Note 1 Seasonal classifications

Where the data shows a clear seasonal trend over a number of seasons, different classification categories apply for different seasons. Details, where applicable, are given in column VI above.

Note 2 Preliminary classifications

Classifications are described as preliminary when an area is being classified for the first time or after a period in suspension. The term may also be used where an incomplete dataset of results was to hand.

Note 3 Dormant Fisheries

Fishery has been dormant for at least 12 months, and limited monitoring data is available. Sites that remain dormant are in danger of their Classification becoming lapsed due to a lack of monitoring data. Producers should contact their local SFPA office if Re-activating in order that monthly classification monitoring sampling may resume.
